Yang Yang, IE, CUHK ERG2310A: Principles of Communication Systems (2002-2003) 8 Chapter 7: Pulse Modulation Time-division multiplex (TDM) Time-division multiplexing is the method of combining several sampled signals in a definite time sequence. Commutator determines the synchronization and sequence of the channels (signals) to be sampled.

Definitions of Analog vs. Digital signals. An Analog signal is any continuous signal for which the time varying feature (variable) of the signal is a representation of some other time varying quantity, i.e., analogous to another time varying signal. It differs from a digital signal in terms of small fluctuations in the signal which are meaningful.
